

ABSTRACT OF THE DISCLOSURE

There is provided a liquid crystal display device including (a) a pixel electrode, (b) a first signal line extending along one side of the pixel electrode, and
5 (c) a second signal line extending along the other side of the pixel electrode. A first length along which the pixel electrode and the first signal line are adjacent to each other is equal to a second length along which the pixel electrode and the second signal line are adjacent to each other, a first space between the pixel
10 electrode and the first signal line is equal to a second space between the pixel electrode and the second signal line. The liquid crystal display device makes it possible to minimize imbalance in parasitic capacitances to be generated between the pixel electrode and the first and second signal lines.
